Step 2: Original application output

python spam_scoring.py

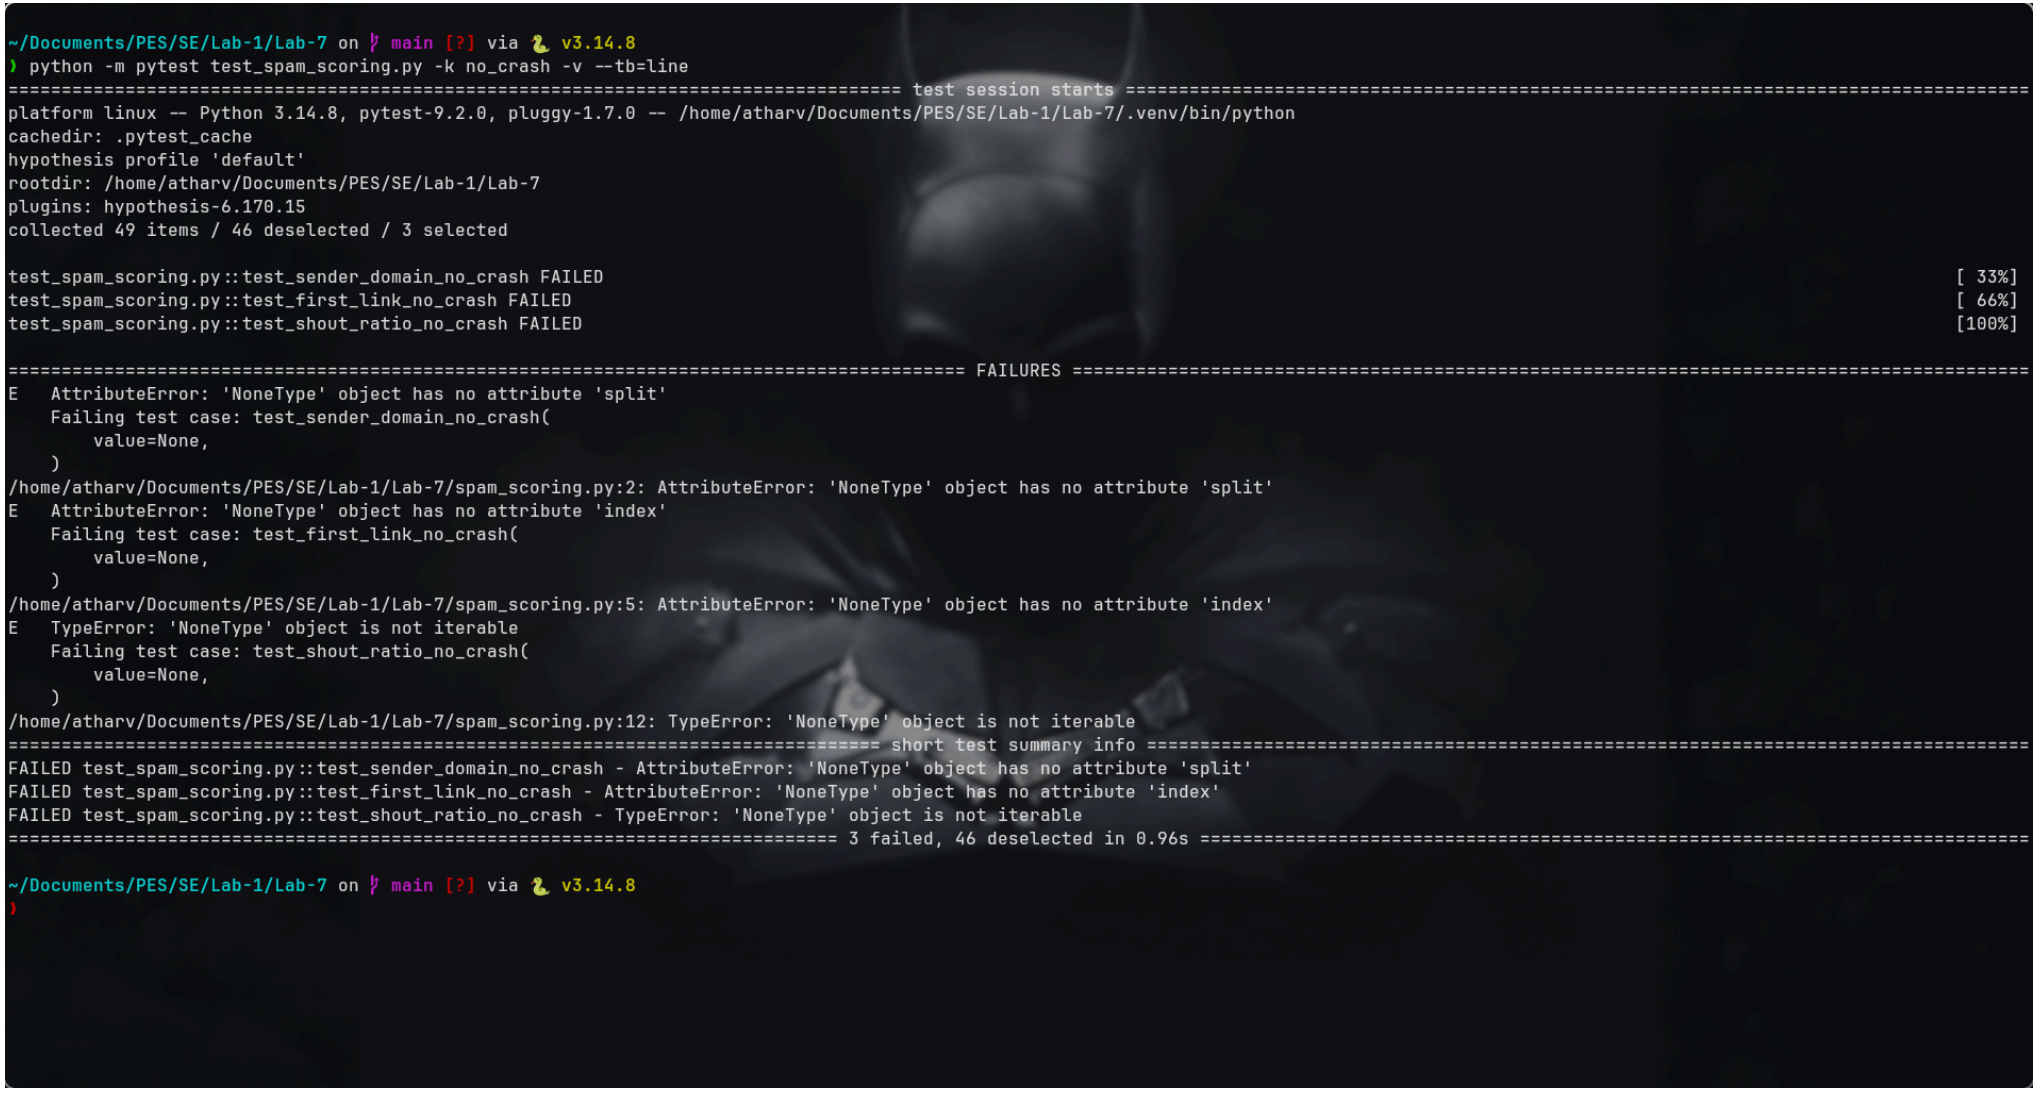

The input 123 !!! causes a ZeroDivisionError.

Step 4: Failing fuzz tests

python -m pytest test_spam_scoring.py -k no_crash -v --tb=line

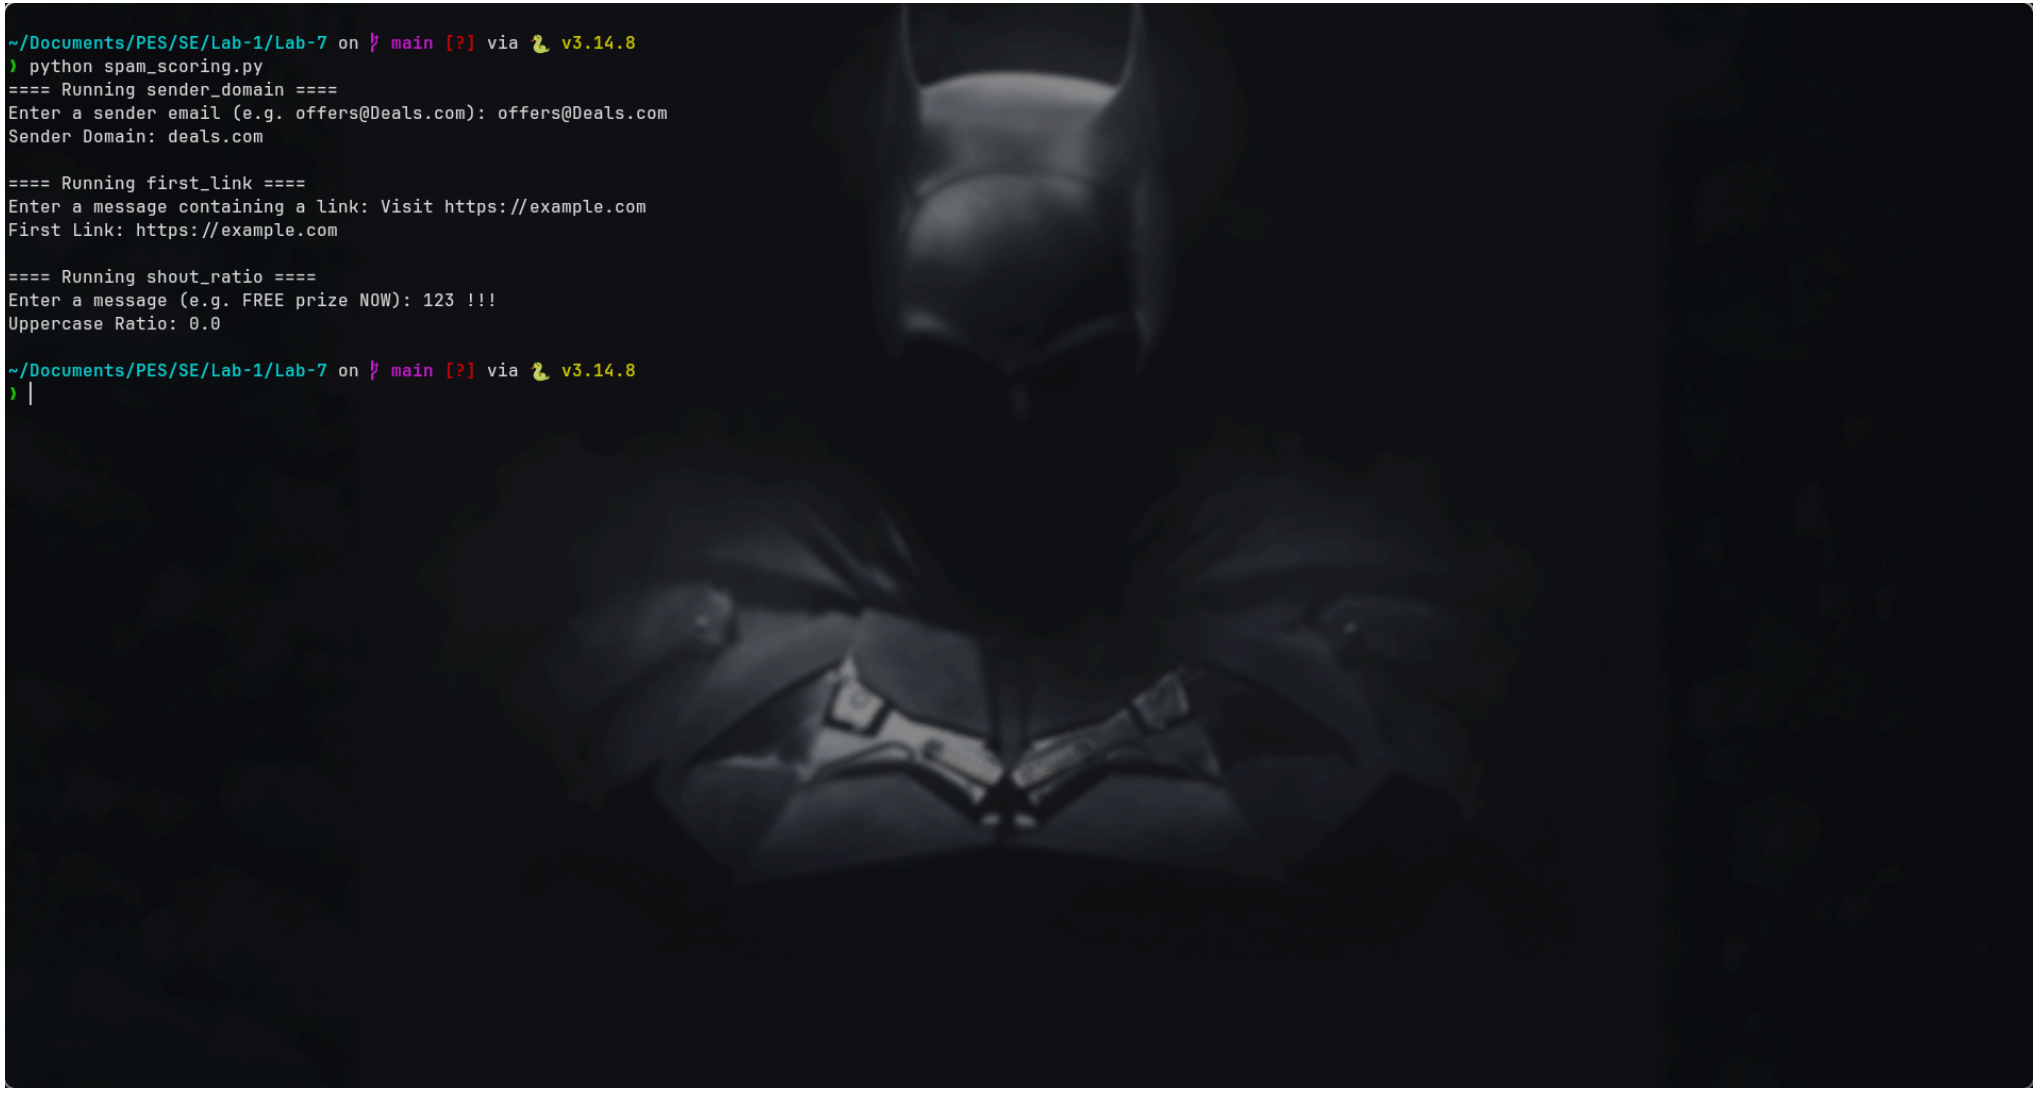

All three functions fail on None: 3 failed, 46 deselected.

Step 5: Fixed application output

python spam_scoring.py

The same inputs complete successfully. The message without letters returns an uppercase ratio of 0.0.

Step 6: Passing tests after the fixes

python -m pytest test_spam_scoring.py --tb=short

All 49 tests pass.
